

Key changes proposed for the DES include:

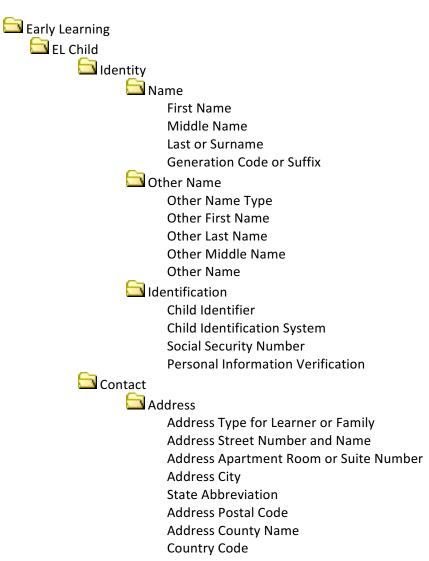

- Consistent naming/use of categories across domains, e.g. common "Disability" category under EL Child, K12 Student, and PS Student.
- Adoption of some common subfolder structures, e.g. K12 adopting the Health subfolders structure from EL, and Academic Record -> Academic Award from PS
- Duplicated "Assessment" category/elements moved/removed to consistently use the "Assessment" domain for mapping.
- Elements in a category in one domain added to another domain when missing and applicable.
- Elements or categories of elements added to new contexts based on recommendations from the Developing CEDS Community.

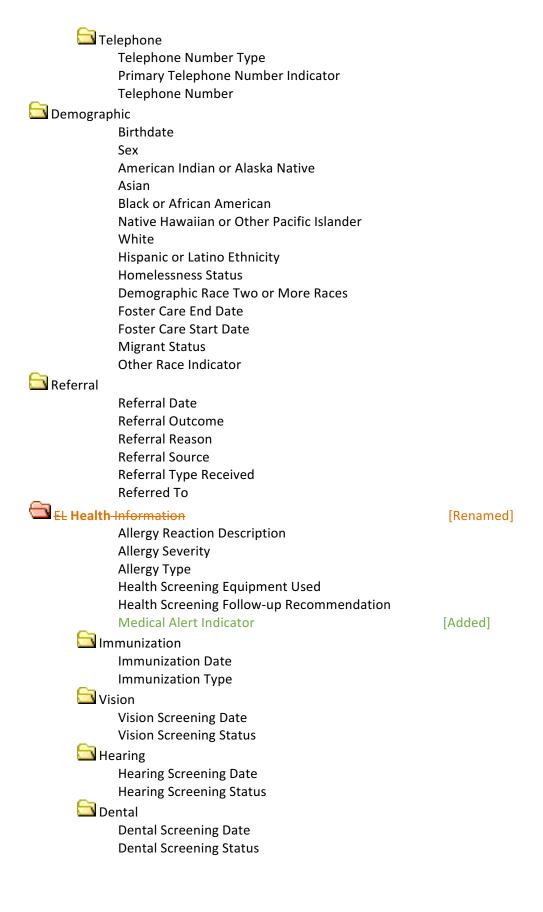

The mockup on the following pages shows the proposed context changes for existing elements. (It does not include the brand-new elements being proposed in version 6, only existing elements as they would be displayed with the context changes.) Changes are color coded and labeled on the right side of each page as:

- [Renamed] The category has been renamed, but remains in the same location.
- [Moved] The category or element was moved from this location to another place in the same domain*. A corresponding item with a "moved here" label can be found in the mock-up.
- [Moved Here] The category or element that was moved from another location in the domain.
- [Added] The category or element added is new to this context and not moved from another location. (The element may already exist in the domain, but is added somewhere else to support a different use.)

(*Moved items are within the same domain except for assessment elements proposed to use the common Assessments domain.)
